                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC (b) detecting a polymorphic site comprising nucleotide positions 901-909 CC of (I), a site comprising cytosine or guanine at position 753 of (IIV) CC or a site comprising (A) (9999090000) or (B) (99990900000) at CC positions 961-972 of (III). The method may be used for genotyping an CC alpha2B, alpha2A or alpha2C receptor gene and further used to determine CC whether an individual is at increased risk of developing a disease CC associated with alpha2B, alpha2A or alpha2, comprising detecting a CC polymorphic site which correlate to disease selected from cardiovascular CC disease, central nervous system disease and combinations of these. In CC addition, the technique may be used to predict an individual's response to an alpha2B, alpha2A, or alpha2C agonist (e.g. epinephrine, clonidine, oxymetazoline, guanabenz, UK14304, BHT933 and CC combinations of these) or antagonist (e.g. yohimbine, prazosin, ARC 239, ranwolscine, idazoxan, tolazoline, phenicolamine and combinations of these or antagonist (e.g. yohimbine, prazosin, ARC 239, ranwolscine, idazoxan, tolazoline, phenicolamine and combinations of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; cardiant; gene therapy; alpha2B-adrenoceptor; alpha2B-AR; glutamic acid repeat; intracellular loop; chromosome 2; catechol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               these) by detecting the polymorphic site and correlating the site to a predetermined response (where the response is correlated to adenylyl cyclase, MAP kinase activity, phosphorylation or inositol phosphate levels). The present sequence is that of a human alpha-2BAR PCR primer, useful for the genotyping methods of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   04-JUL-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAD04761;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAD04761 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          receptor gene (I)-(III) by detecting a polymorphic site, comprising; (a) obtaining a sample having a polymorphic bite, comprising; alpha2A or alpha2C or fragment or complement of; and (b) detecting a polymorphic site complement of; and (c) detecting a polymorphic site complement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Genotyping an alpha-2B, 2A, or 2C adrenergic receptor gene useful for determining whether an individual is at increased risk of developing a disease associated with the corresponding receptor comprises detecting a polymorphic site -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 10;

(alpha2B-AR) variant protein. Alpha2B-AR has a glutamic acid repeat

celement (emino acids 298-30) of 12 glutamates, in an acidic stretch of

10 la maino acids (emino acids 294-311), located in the third intracellular

11 cloop of the receptor polypeptide. The variant is obtained by deletion of

12 cloop of the glutamates from the Glu repeat (amino acids 307-309). Alpha2B-AR

                                                                                                                                                                                                                                                                                                                                                                                         ş
                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to genotyping an alpha-2B, 2A, or 2C adrenergic CC receptor gene (I)-(III) by detecting a polymorphic site, comprising; CC (a) obtaining a sample having a polymorphic site, comprising; CC (a) postaining a sample having a polymorphic site comprising complement of; and CC (b) detecting a polymorphic site comprising nucleotide positions 901-909 CC (i), a site comprising (X) (gyggggggcg) or (B) (gyggggggtgag) at CC (positions 961-972 of (III). The method may be used for genotyping an CC positions 961-972 of (III). The method may be used for genotyping an CC alpha2B, alpha2A or alpha2C receptor gene and further used to determine CC whether an individual is at increased risk of developing a disease CC associated with alpha2B, alpha2A or alpha2, comprising detecting a CC polymorphic site which correlate to disease selected from cardiovascular CC disease, central nervous system disease selected from cardiovascular CC disease, central nervous system disease selected from cardiovascular CC disease, the technique may be used to predict an individual's response CC norapinephrine, clonidine, oxymetazoline, guanabenz, UK14304, BHT933 and CC combinations of these) or antagonist (e.g. vohimbine, prazosin, ARC 239, CC rauwolscine, idazoxan, tolazoline, phentolamine and combinations of these by detecting the polymorphic site and correlating the site to a predetermined response (where the response is correlated to adenylyl CC cyclase, MAP kinase activity, phosphorylation or inosito phosphate CC (Aligney). The present sequence is that of the third intracellular loop of the human alpha-2BAR variant, the sequence is deleted for a 9 nucleotide CC (Aligney).
                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method for detecting a risk of hypertension by determining the pattern of alleles encoding a variant alpha-2B-adrenoceptor (AR) protein. The methods and compositions of the invention are useful for detecting risks and targeting treatment for hypertension. The kit is also useful for selecting for clinical drug trials testing the antihypertensive effect of compounds. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CDS

Alpha2B-AR has a glutamic acid repeat element acids catids 298-309) of 12 glutamates, in an acidic stretch of 18 amino the receptor polypeptide. Alpha2B-AR gene is located intracellular loop of Alpha2-AR mediate many of the physiological effects of the catecholamines, norepinephrine and epinephrine. An antagonist of vascular contraction of coronary arteries and a disease involving vascular contraction of coronary arteries and a disease involving as coronary heat disease (CHD), unstable chronic angina pectoris which is clinically expressed as Prinzmetal's variant form or acute myocardial infarction (AMI). Alpha2B-AR gene is used in gene therapy.
                                                                                                                                                                                                                      18-FEB-2002

                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                 CC The invention relates to genotyping an alpha-2B, 2A, or 2C adrenergic CC (a) obtaining a sample having a polymorphic site, comprising; CC (a) obtaining a sample having a polymorphic site encoding an alpha-2B, CC (b) detecting a polymorphic site comprising mucleotide positions 901-909 (CC of (I)), a site comprising cytosine or guanine at position 753 of (IIV) (CC or a site comprising (A) (9990cg990cg) or (B) (9990cg9gyag) at (CC alpha2B, alpha2A or alpha2C receptor gene and further used to determine CC alpha2B, alpha2A or alpha2A or alpha2, comprising detecting an CC disease, central nervous system disease selected from cardiovascular caddition, the technique may be used to predict an individual is at increased risk of developing a disease polymorphic site which correlate to disease selected from cardiovascular caddition, the technique may be used to predict an individual's response combinations of these. In CC disease, central nervous system disease and combinations of these. In CC combinations of these) or alpha2C agonist (e.g. epinephrine, clonidine, oxymetazoline, guanabenz, UK14304, BHT933 and CC rauwolscine, idazoxan, tolazoline, phentolamine and combinations of these) by detecting the polymorphic site and correlating the site to a cyclase, Map kinase activity, phosphorylation or inositol phosphate (c evels). The present sequence is that of the third intracellular loop of cuthe human alpha-2BAR (GenBank Accession AR709500), the sequence includes alpha-2BAR variant (AA199906).
                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method for detecting a risk of hypertension by determining the pattern of alleles encoding a variant alpha-2B-adrenoceptor (AR) protein. The methods and compositions of the invention are useful for detecting risks and targeting treatment for hypertension. The kit is also useful for selecting for clinical drug trials testing

CC The invention relates to a combination which, comprises a number of CC polynucleotide probes comprising a sequence selected from one of the 1490 CC sequences mentioned in the specification. The combination is useful as an CC array element in a microarray for monitoring the expression of a number CC of target polynucleotides. The microarray is particularly useful in the CC diagnosis and treatment of cancer and immunopathology and neuropathology. CC The microarray is useful in diagnostics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, CC forensics and pharmacogenomics. The microarray is also useful for CC monitoring progression of diseases and for developing sophisticated CC profiles for the effects of currently available therapeutic drugs. The CC combination is also useful for purifying a subpopulation of mRNAs, cDNAs and genomic fragments and in research and diagnostic applications. The CC array can detect changes in expression in a large number of genes coding CC for different signaling pathway populations which can be used to diagnose CC various diseases including cancer e.g. adenocarcinoma and leukaemia, CC immunopathies e.g. AIDS and asthma, neuropathies e.g. Alzheimer's disease CC probe of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                         The present invention describes antigenic peptides (1) comprising:
CC (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino
CC acids. Also described: (1) an assay for the detection of a particular
CC and (2) an isolated antibody having high specificity and high affinity
CC or avidity for a particular GPCR. (1) can be used as GPCR modulators and
CC antibodies. The antigenic peptides for GPCRs are useful in detecting
CC in gene therapy. The antigenic peptides are also useful for detecting
CC antibodies. The peptides and antibodies are also useful for detecting the
CC GPCRs and antibodies are useful for diagnosing and designing drugs for
CC GPCRs and antibodies are useful for diagnosing and designing drugs for
CC diseases, or autoimmune diseases, growth-related diseases, cell
CC diseases, or autoimmune diseases, e.g. AlDS, Alzheimer's disease,
CC osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute
CC diseases, Parkinson's disease, multiple sclerosis, pain, psoriasis,
CC onseess, Parkinson's disease, multiple sclerosis, pain, psoriasis,
CC close, pellepsy, asthma, tuberculosis, obesity, nausea, hypertension,
CC any other disorder in which GPCRs are involved. The antibodies may be
CC GPCR proteins given in ABP81675 to ABB82018, which are used in the
CC exemplification of the present invention.
                                                                                                                                                                                                                                                                                                               Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to nucleic acids comprising a segment of chemically pretreated DNA of adrenergic alpha-1C-receptor gene. The invention also relates to oligonucleotides or peptide nucleic acid (PNA) oligomers useful for detecting cytosine methylations. The pretreated DNA is useful for the diagnosis or therapy of behavioural disorders, neurological disorders and cancer, in particular major depressive disorder, Tourette's syndrome, schizophrenia, psychiatric and neurological disorders, smoking, drug abuse, alcoholism, personallty traits, compulsive gambling, human immunodeficiency virus dementia, migraine, behaviours in schizophrenia and schizophrenia, personality traits, behaviour in patients with schizophrenia. The nucleic acid is useful for detecting the methylation state of all CpG dinucleotides and/or single nucleotide polymorphisms (SNPs). The present sequence is human chemically treated genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; genotyping; alpha-2B; alpha-2A; alpha-2C; adrenergic receptor; polymorphic site; allelic variant; cardiovascular disease; central nervous system disease; adenylyl cyclase; MAP kinase activity; phosphorylation; inositol phosphate; alpha-2AAR; GenBank Accession AP281308; chromosome 10; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel nucleic acid useful for diagnosis and therapy of behavioral disorder, neurological disorder and cancer, comprises a sequence of segment of chemically pretreated DNA of adrenergic alpha-1C-receptor

CC This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC genomic sample of DNA. The sample is treated chemically to convert CC genomic sample of DNA. The sample is treated chemically to convert CC genomic sample of DNA. The sample is treated chemically to convert CC genomic sample of DNA that contains the target C is amplified to form a labeled amplicon. CC member, of oligonucleotides and/or peptide-mucleic acid (PNA) oligomers CC and the degree of hybridisation to both classes is determined from the CC lasses of oligomers, the degree of methylation is calculated. The method CC classes of oligomers, the degree of methylation is calculated. The method CC classes of oligomers, the degree of methylation is calculated. The method CC classes of oligomers, the degree of methylation is calculated. The method CC systems etc., particularly by detecting mutations or single nucleotide CC systems etc., particularly by detecting mutations or single nucleotide CC classes and for investigating cell differentiation. The method allows the
                             polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.

                                                                                                                                                   This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one CC member, of oligonuclectides and/or peptide-nucleic acid (PNA) oligomers CC and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two CC classes of oligomers, the degree of methylation is calculated. The method is used: (A) for diagnosis and/or prognosis of side effects of the central nervous, cardiovascular, gastrointestinal and respiratory contents etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method disclosure of the invention.

            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ..

No. is the number of results predicted by chance to have score greater than or equal to the score of the result being part and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                 Score
